In response to the delay in adult passage at Little Goose Dam under the high flow conditions occurring this year there was a general agreement at FPAC to implement the following operation to assess whether adult passage increases.

- Provide 40% spill during the hours of 4AM until 10 AM June 3 and June 8.
- This will violate the MOP operation at the project.
- Pass inflow during the hours 10AM until 4:00 PM
- Increase the project discharge to return to MOP during the hours 4:00 PM through 4:00 AM
- Maintain constant turbine operation during the hours of 4:00 AM until 10:00 to the extent possible.
