

# TDG MANAGEMENT COMMUNICATIONS

## TDG Management Procedures (included in Court Order)

### Daily Process Summary

1. Review data
2. Run SYSTDG if needed
3. Determine Spill Cap at maximum level to meet, but not exceed state WQS
4. Coordinate with NOAA
5. Notify projects and BPA (spill cap changes made at 1600 hrs)
6. Post spill caps on web
7. Discuss decision making at TMT

## Technical Questions or Operational Recommendations

The Corps will continue to discuss TDG management at TMT each week.

For technical questions:

- Bring up at TMT (*preferred*)
- For urgent or time-sensitive questions, call or email the POC. Due to workload, calls and emails may not be answered until after spill review, or responses will be addressed during the TMT update.

For operational recommendations :

- Work through Regional Coordination Process: FPAC → TMT → RIOG (if necessary)
