30 April 2007

MEMORANDUM FOR THE RECORD

SUBJECT: Dead juveniles in orifice tube U11B-S.

On 29 April 2007, around 1030, Bonneville Project Fisheries found orifice 11B-S closed. Water was spraying out around the orifice lense seal. The gap was large enough for juvenile fish to get caught. Five dead fish were found.

Bonneville Fisheries tightened the lense back to the orifice light tube, thus stopping the leak and the negative impacts to fish.

Project Maintenance was notified via a TR. They have inspected and secured the lense.
