

Change Request Number: 11BON007

Date: 11/04/2010

Proposed by: BON Fisheries

Location of Change: BON section 1.2.1.1.

Proposed Change: Remove DSM language.

1.2.1.1. The Powerhouse One collection channel and A-branch ladder join the south spillway entrance and B-branch ladder at the junction pool at the Bradford Island ladder to form the Bradford Island fishway. The Ice and Trash Sluiceway (ITS) downstream migration channel (DSM) is also used for adult passage ~~throughout the year, from early September, as soon as fish screens are installed, through, at least, December 15.~~ The system consists of three automated chain gates and 27 manual chain gates ~~12" orifices, six STSs and VBSs, and a migration channel that runs south and out the ice and trash sluiceway.~~

Reason for Change: PH1 DSM wall was removed winter 09/10, and the ITS was modified and is used as a fish passage route.

Comments from others:

NOAA Fisheries- Agree with change.

USFWS- supports

Record of Final Action: approved at 21 January 2011 meeting.
