

Draft FPP Change Form

9/14/07

Change Request Number: 08JDA_006

Date: 1/31/2008

Proposed by: Project Fisheries

Location of Change

JDA 3.3.2.4

Proposed Change:

If we find one dislodged during the mid season dive, it may be more prudent for fish and repair cost to close the respective valve rather than to have the fishway out of service for the dive repair.

Reason for Change:

Closing 1 valve prevents fish from entering the system and will usually have little effect on water flow, since there are usually many adjacent valves. We've done this before for TD collection channel per FPOM approval. This may not be applicable to every scenario. Repair plan should be case by case basis and FPOM approved.

Comments from others:

Record of Final Action:

Adding language “unless coordinated differently” to the paragraph.
