

**Draft FPP Change Form**

9/14/07

**Change Request Number:** 08TDA\_003

**Date:** 10/29/2004

**Proposed by:** Project Fisheries

**Location of Change**

TDA 2.6.1.2.a.4

**Proposed Change:**

We feel a periodic surface flow measurement of the entire channel is a better alternative than the single location velocity meter.

**Reason for Change:**

The velocity meters are a challenge to keep in calibration. If all agree, we can implement as an FPP requirement rather than fix the damaged meters.

**Comments from others:**

**Record of Final Action:**

No changes made. It was decided there needs to be a larger discussion regarding velocity criteria.

Gary Fredricks recommends establishing criteria for each Project based on adult passage information.

Bob Cordie agreed to chair a new FPOM task group to look at velocity criteria. More members will be added at the February FPOM.
