

**MEMORANDUM FOR THE RECORD****SUBJECT: 18BON32 MFR – Adult Fish Facility Pacific Lamprey Mortality.**

On 07 July, University of Idaho biologists contacted Project Fisheries to alert them of (1) Pacific Lamprey mortality. The fish was tagged on 6 July, and was found dead in its holding tank within a couple hours. According to a U of I biologist, the fish appeared healthy before tagging and nothing out of the ordinary occurred during the tagging process. The carcass was saved in the AFF freezer.

- A. Species – Pacific Lamprey (*Entosphenus tridentatus*).
- B. Origin – AFF.
- C. Length – 66 cm.
- D. Marks and tags – A tag was implanted, but then removed after mortality.
- E. Marks and Injuries found on carcass – See images below.
- F. Cause and Time of Death – Unknown.
- G. Future and Preventative Measures – None.

(Alive in photo above)

Sincerely,  
Project Fisheries
