Unit 17 is currently running. We are hoping U18 can be up and running today, but the clearance has to be finalized this morning and then we will figure out if it needs to be a full TW dewatering. Unlikely to have to salvage fish. Once I hear more updates I'll let ya know.

If unit 17 is not already on, would suggest that is the next, since it would be better to have some flow on both sides if possible. I think we have enough flow for that hopefully. ie 17 is better than 12 with 18 out, thanks.

Um could we also get a return to service date, or at least a guess?
