

MEMORANDUM FOR THE RECORD

SUBJECT: 18TDA 01 MFR AWS Shutdown due to differential

The Dalles north fishway is presently dewatered for annual maintenance. Return to service expected Feb 7. The AWS backup system has been in service for attraction to the east fishway as viable passage route, due to the delay in the fish unit breaker rehab contract. It has been successfully maintaining entrance criteria at the east entrance. It is also showing positive results of passing numerous steelhead and chinook as seen from video monitoring at the count station. However, a noticeable increase in differential to ~3.5' has been observed on the intake trashrack. Suspecting debris and milfoil accumulation, the AWS will be shutdown overnight Feb 5 in attempts to float off this debris. It will return Feb 6 AM.

- A. Species – Steelhead and Chinook
- B. Origin – NA
- C. Length – NA
- D. Marks and tags – NA
- E. Marks and Injuries found on carcass – NA
- F. Cause and Time of Death – NA
- G. Future and Preventative Measures – NA

Sincerely,
Project Fisheries
