

**MEMORANDUM FOR THE RECORD 23TDA1**

**SUBJECT: North Fishladder Mystery Mortality**

On 1/1/23 a salmonid mortality was noticed atop a ledge in the north fishladder during a fishway inspection. The north fishladder was in full operation. Possible causes include river otters leaving prey on ledge or drifted into eddy during higher tailwater after death.

- A. Species –Adult Coho
- B. Origin –NA
- C. Length –NA
- D. Marks and tags –NA
- E. Marks and Injuries found on carcass –None visible from distance
- F. Cause and Time of Death –unknown
- G. Future and Preventative Measures –none at this time

Sincerely,  
Project Fisheries
