# Nez Perce Tribe Department of Fisheries Resources Management Pacific Lamprey Translocation Project – John Day Dam - Summer 2014

#### PROJECT WORK PLAN

The Nez Perce Tribe Department of Fisheries Resources Management (NPTDFRM) plans to collect approximately 282 adult lamprey, depending on availability, from John Day Dam. Note that the total aggregate adult Pacific lamprey collected at Bonneville, John Day and The Dalles Dam would not exceed 910 fish. Collection of adult Pacific lamprey would be conducted intermittently from approximately Late June through September, 2014, contingent on run timing, trapping success, fish availability and funding.

Prior to collection Nez Perce Tribe staff will obtain ID badges, an access key and attend a safety/coordination meeting with the Project Biologist. Staff also attended a hands-on operation and safety training for the mechanized adult lamprey trap on the south fishway (May 8, 2014). Trapping days would be determined through coordination with the Confederated Tribes of the Umatilla Indian Reservation and the Yakama Nation. Adult lamprey collections would focus on the mechanized lamprey fish trap at the south fish ladder. Additional adult lamprey may be collected at the north fishway using pot traps behind the picket leads and in the SMF facility (fall back adults). We have obtained onsite, hands on guidance from the Confederated Tribes of the Umatilla Indian Reservation regarding procedures for collecting adult lamprey from pot traps. Trap placement will be chosen to avoid contact with any migrating salmonids. The collected adult lamprey from all sources will be loaded into a portable fish tank and transported to Nez Perce Tribal Hatchery, Clearwater County, Idaho.

Loading into the portable fish tank would be no more than 200 adults per load. The adults would be transported through Oregon and Washington to the Snake River Basin, Idaho, and unloaded into an 8' X 8' insulated fiberglass fish tank plumbed for a constant flow of 4-5 gpm per tote. Maximum loading density would be about 242 fish per tote. A prophylactic treatment (OTC) for furunculosis would be administered promptly upon arrival at Nez Perce Tribal Hatchery, Idaho. NPTDFRM has coordinated with Miro Zyndol, the Confederated Tribes of the Umatilla Indian Reservation and the Yakama Nation regarding this work.

The objective is to augment juvenile lamprey production in the Snake basin, in view the continued decline of lamprey in the Snake Basin, as exemplified by the critically low counts of adults passing Lower Granite Dam. Recent adult lamprey counted passing Lower Granite Dam during the day have numbered 12, 15, 48, 48 and 19 in 2009, 2010, 2011, 2012 and 2013, respectively. The downward spiral of adults returning to the Snake River basin to spawn translates to severely reduced presence of juvenile lamprey available to emit attractants that may draw adults into the spawning tributaries.

#### PROJECT IMPACT STATEMENT

The NPTDFRM has no anticipated impacts to the existing project activities. Project safety procedures will be applied.

## JOB HAZARD SAFETY ANALYSIS

See attached Activity Hazard Analysis sheet.

#### MATERIAL SAFETY DATA SHEETS (MSDS)

No hazardous materials will be brought on site for this activity.

## **FUNDING ARRANGEMENTS**

No project support will be necessary to perform job activities.

#### **PERMITS**

The NPTDFRM has a NPT Fish and Wildlife Commission collection/transport permit.
