TABLE 3 and TABLE 4

**STEELHEAD OVER COLUMBIA AND SNAKE RIVER DAMS 1953-2019**

**BY RUN-YEAR (JUNE 1 - MAY 31)**

**Information Below Concerns the Following Two Tables**

Estimating the size of the upriver steelhead run has previously been hampered because of the calendar year approach used in the summary tables. Problems in accountability arise due to over wintering behavior of summer steelhead, especially Snake River stocks, which often have sizeable proportions of the run remaining below mainstem projects during the winter months. Migration of these steelhead commences again the following spring when warming reservoir temperatures trigger upstream movement. For this reason, an additional table has been prepared that summarizes steelhead trout counts at each project on a "fish year" basis: June 1 - May 31. Because all stocks of steelhead cross Bonneville Dam during the calendar year, those summary counts have not been modified.

Footnotes for the Following Two Tables

\*Because counting started at each dam early in the year after construction was complete, these figures are for the latter part of the run year only. That part of the run year starting after June 1st of the previous 'year passed the dams without being counted.

\*\*1981 was the last year visual counts were made at Little Goose Project until 1991.

### FISHWAY ACTIVITIES

The following are fishway modifications for the 2018/2019 passage year:

### **POWERHOUSE ONE LAMPREY**

**2019.** Bradford Island LPS exit ramp had grooves deepened and lid installed to dissuade algae growth and avian predation.

**2018/19.** Tested reduced nighttime entrance velocities at PH1 and B-branch entrances.

**2018/19.** Field tested the Bradford Is. Wetted Wall (BIWW).

### **POWERHOUSE TWO LAMPREY**

**2019.** Orifice slots in weir 1 closed permanently. Six additional slots drilled in odd numbered weirs to exit (7, 9, 11, 13, 15, &17).

**2019.** Lamprey weir caps installed on NDE and NUE.

### ***FISH REMOVAL***

Fish passage facilities and turbine units are taken out of service and dewatered to allow for inspection, preventative maintenance, repairs, and modifications. As facilities and turbine units are dewatered, project biologists follow procedures outlined in the FPP and detailed in the Fish Salvage Plan to minimize impacts on fish. Adult salmonids and adult lamprey are generally released into the forebay above the new navigation lock. Juvenile salmonids, juvenile lamprey, and sturgeon are generally released below the dam at the Hamilton Island boat launch. The following is a summary of the number of fish that were removed during facility and turbine unit dewaterings. All fish were recovered in good condition unless otherwise noted.

<b>Date</b>	<b>Location</b>	<b>Fish Salvaged</b>	<b>Release Site</b>
12/3	UMT	2 juvenile salmonids, 3 American Shad, ~200 Cyprinids, 4 adult Steelhead Trout, and 3 adult Chinook Salmon	Upstream of Nav Lock

TABLE 29  
MONTHLY COUNT OF LAMPREY at  
BONNEVILLE DAM 1939<sup>1</sup> - 1969, 1997 – 2019

The counts in the following table represent an approximation of trends, only. Lamprey are difficult to count. They move back and forth in the count window, spend long periods of time resting and are more likely to pass at night than salmonids. In addition, lamprey do not always use the fish ladder and may pass over a dam through several routes including the navigation lock, the auxiliary water supply, and specific lamprey passage structures.

<sup>1</sup>No data are available for 1938.

<sup>2</sup>Because of changes in the Washington shore counting station, lamprey counts from 1939-1949 cannot be compared with counts from 1950 on.

<sup>3</sup>Because of the heavy shad run, fish counters were not asked to count lamprey from June 1 through July 27.

Note: Lamprey passage systems (LPSs) operational between May 1st and October 31st.

Lamprey Passage System counts are 24-hour mechanical counts, corrected.

During the operation of the wetted wall, located upstream of the Bradford Island count station, lampreys using the wall could be counted passing at both the window and the LPS potentially inflating the counts by an estimated 1,000 lampreys.

Estimated lamprey passage at Bonneville Dam in 2019 including both 24 hour window counts and LPS & flume = **70,762**

## INTRODUCTION

The Dalles Dam has specific requirements for Columbia River fish passage that are specified in the annual Fish Passage Plan. The Dalles Dam has two fish ladders for upstream adult fish passage, as well as an ice trash sluiceway and spillway used for downstream steelhead kelt and juvenile fish passage. The following document is a summary of all fish related activities that occurred at The Dalles Dam in 2019. In addition Northern Wasco Co PUD has a turbine that supplies auxiliary water to the north fishway, which has a complete juvenile bypass system. Information on this systems operation can be acquired through Pacific States Marine Fish Commission monitoring report.

## FISHWAY OPERATION

The following information includes fish passage system operation for calendar year 2019. Total length of time for annual fishway outages can be determined by referring to previous years' annual reports. These fishways were closed or dewatered for maintenance when they were not in operation.

### *East Adult Fishway*

Jan 1 – Jan 16 Dewatered for winter maintenance  
Jan 17 - Feb 8 AWS backup open  
Feb 8 – Mar 21 AWS backup closed for vibration  
Mar 21 – Mar 31 AWS backup open for second time  
Mar 31 – Apr 2 AWS backup closed for flooding  
Apr 2 – Apr 8 AWS backup open  
Apr 8 Fish units return to service?AWS backup closed  
Dec 3 – Dec 31 Dewatered for winter maintenance  
Aug 7 Attraction water off half day for required ROV grating inspection

### *North Adult Fishway*

Jan 1 – Jan 21 In full operation with attraction water  
Jan 21 – Feb 7 Dewatered for annual maintenance  
Feb 7 – Dec 31 In full operation with attraction water  
Aug 7 Attraction water off half day for required ROV grating inspection

### *Ice/Trash Sluiceway (Juvenile)*

Jan 1- Feb 28 End gate closed  
Mar 1 – Mar 31 In service with 4 sluice gates open  
Apr 1 – Nov 30 In service with 6 sluice gates open  
Dec 1 – Dec 16 In service with 4 sluice gates open  
Dec 16 – Dec 31 End gate closed

### *Spillway*

Jan 1 – April 9 Closed, all gates on seal  
April 10 – Aug 31 Variable spill  
Sept 1 – Dec 31 Closed, all gates on seal

## FISHWAY DEWATERING

Dewatering fishways provides the best opportunity for maintenance and inspection. To dewater the fishladders, exit bulkheads are installed and the ladder is allowed to drain. Entrance bulkheads are installed and dewatering pumps operated to dewater all

areas of fishways below tailwater elevation. Fisheries personnel enter these areas to salvage trapped fish when water levels allow entry. Fish are pushed toward tailwater or captured. Captured fish are transported to forebay or tailwater, depending on location, fish species, age class and stress levels. A follow up inspection is made to capture any missed fish. Efforts are made to provide continual water supply during the entire operation to reduce fish stranding and stress. Fishway areas that cannot be dewatered are inspected by ROV underwater camera.

## RESEARCH

The following are a list of fish related research and contract personnel that were on site during the 2019 passage season;

4 Peaks – New fish counting contractors performed fish counts at the north and east fishways via count stations.

Oregon Dept of Fish and Wildlife – Captured, tagged, and collected biological data from northern pikeminnow as part of an evaluation of the Northern Pikeminnow Management Program.

Oregon Department of Fish and Wildlife and Fish Passage Center – Continued to provide once monthly fishway inspections of adult and juvenile systems.

Pacific States Marine Fish Commission – FERC required sampling at the Northern Wasco County PUD intake structure as per the Cooperative Agreement between Pacific States Marine Fisheries Commission and Wasco County PUD.

Pacific States Marine Fisheries Commission PTAGIS Information System – monitored Thin Wall PIT Tag detection system in The Dalles east and north count stations.

U.S. Dept of Agriculture – Provided avian hazing of piscivorous birds to reduce avian predation on juvenile salmonids May to August via pyrotechnics during juvenile passage season.

U. S. Geological Survey – Total Dissolved Gas (TDG) and water temperature monitoring.

CTUIR - Captured adult Pacific lamprey as part of the on-going project to restore lamprey to various tributaries. CTUIR worked with the Nez Perce and Yakama Nation to help with lamprey collection efforts. Yakama Nation was allocated 209, 189 for Nez Perce and 196 for CTUIR.

For the second and final year, the University of Idaho captured and released of adult Pacific lamprey in order to monitor upstream migratory movements outfitted with radio- and PIT-tags at Bonneville Dam. tagged lamprey for testing lower entrance flows 6/1 to 8/31. Entrances were opened and fish turbines were reduced in order to change from salmon to lamprey criteria. Conclusions point to no benefit for passage

For the second and final year, Portland district water quality section placed temperature string in front of both ladder exits to look for cooler water gradients from the forebay to perhaps tap into this column of cooler water due to environmental concerns of potential overheating summer ladder conditions. Data still being analyzed.

## FISHWAY ACTIVITIES

### ***FISHWAY DEWATERING PROCEDURES***

During fishways dewaterings, bulkheads were installed and drain valves were opened. After the areas were dewatered, fisheries personnel entered and salvaged any stranded fish (see table below). Salvaged fish were transported to either the forebay or tailwater (depending on circumstances such as fish species, dewatering location, age class, or stress levels). Follow up inspections were performed to account for any overlooked fish. Efforts were made to provide continual water supplies throughout the

operation, to minimize fish stress. Minimal fish handling practices were utilized throughout the process. Fishway areas not listed were inspected by a Remote Operated Vehicle (ROV). There were 5 juvenile lamprey mortalities, and 1 adult steelhead encountered during the 2019 JD Fishway dewaterings.

**TURBINE DEWATERING PROCEDURES**

When following operational guidelines, turbine dewatering requires minimal fish handling. If a turbine unit fails, operational guidelines cannot always be followed, which may result in stranded fish. Fish removed from these areas face higher risks, due to increased handling. Procedures are continually evaluated to determine the best methods to reduce fish stress and mortality. Currently, fish are removed from scroll cases and draft tubes with fish bags. Prior to fish salvage, transport tanks are prepped for fish transport. If fish numbers are higher than the two bags can safely handle, the transport tanks are used to remove fish. The fish are then released by crane.

**RESEARCH**

Oregon Dept. of Fish and Wildlife – Ongoing BPA funded research associated with the Northern Pikeminnow Management Program. The fish stomachs’ sampler collected the diet and other biological data from NPMs caught by the PSMFC dam anglers.

Oregon Department of Fish and Wildlife/ Fish Passage Center- Continued to perform the monthly, FPOM-directed inspections of all JD adult and juvenile fishways (see the FPC’s annual report.)

CRITFC- Collected adult Pacific lamprey for the tribal restocking projects. The Umatilla, Nez Perce, Warm Springs, and Yakama tribes were all involved in 2017.

Pacific States Marine Fish Commission – sampled juvenile salmonids at JD SMF 1 April through 15 September. Please see the FPC report for results and details.

### FISHWAY ACTIVITIES

Temperature monitoring occurred in both ladders from 1 April to 30 September.

Washington ladder maintenance activities in January consisted of maintenance on all above water systems and completion of the entrance weir drive system rehabilitation. The entrance pool was again dewatered and the diffuser grating was physically inspected. Grating supports were repaired in diffusers 1, 2 and 5 through 9.

The Wasco County PUD system did not provide axillary water from 2 to 23 January.

Oregon ladder maintenance activities in January and February consisted of maintenance on all above water systems. Entrance weirs NFEW2 and NFEW3 drive systems were rehabilitated. The lamprey passage structure below SFEW2 was modified. Due to budget constraints, floating orifice gate (FOGs) rehabilitation was again delayed. The diffuser grating was not inspected. Due to the 1000 cubic feet per second (cfs) auxiliary conduit discharge valves requiring rehabilitation, the conduit was not removed from service again this year.

The fish pumps were out of service from 24 January to 1 March for annual maintenance. Fish pump 1 was out of service for overhaul from 18 March to 31 December.

From 28 March to 17 December, the juvenile bypass channel was operated for both juvenile and adult fallback passage. From 17 to 20 December, the system was in emergency bypass during ESBS removal. From 1 January to 28 March and 20 to 31 December, the system was out of service for maintenance. When in emergency bypass or out of service, the system does not provide auxiliary flow to the Oregon ladder's north powerhouse entrances.

## FISHWAY ACTIVITIES

Water temperatures were recorded hourly, from 1 April to 31 December, from both fish ladder exit pools, the south fish ladder junction pool, and the first bend upstream of the north fish ladder collection channel.

The removable spillway weir (RSW) operated for fish passage from 3 April to 11 August. The RSW was closed before the end of the spill season (31 August) due to low river flows.

The Juvenile Fish Facility was operated for juvenile fish bypass and adult fallbacks from 25 March to 19 December. Juvenile fish were sampled from 1 April – 15 July, twice per week.

An adult lamprey entrance structure, similar to the McNary prototype, was installed at the south shore entrance #2 (SFE-2) during the winter maintenance period. The lamprey entrance was open from June 27 to October 2. Monitoring of lamprey passage and adult salmonid behavior at the structure occurred using Didson imaging sonars.

Unit 2 runner replacement was completed in May. In late September/early October, sensor fish were sent through the turbine to characterize the physical environment with the fish-friendly runner, and live fish were used for a direct injury study of the turbine.

### FISHWAY ACTIVITIES

Water temperatures were recorded hourly from north and south fish ladder exit pools, upper diffusers, and ladder entrance transition pools. Hourly readings were taken from June 1 to September 30. The purpose was to determine if summer spill had any effects on exit pool temperatures.

Monthly inspection of the north and south ladder exit pool zebra mussel monitoring stations occurred throughout the ladder operation period. No zebra mussels were discovered.

Fish Pumps #2 and #3 were out of service from 3 January through 28 Feb for annual maintenance. Fish pump #1 was out of service until 9 April for bushing repairs. All fish pumps operated 9 April until 31 December.

The juvenile fish facility was operated for juvenile fish transport/bypass and adult fallbacks from 7 March to 16 December.

The RSW at Lower Monumental was in service as per requirements of 2019 operating year. The RSW spill was closed at 0630 on August 8.

## FISH LADDER OPERATING SCHEDULE

01 January – 02 January	Ladder in service
02 January - 22 February	Ladder dewatered for annual maintenance
22 February – 31 December	Ladder in service

---

## FISHWAY ACTIVITIES

Adult fishways were inspected for proper operating criteria daily with an average of three fishway inspections per week during fish passage season.

Water temperature in the ladder was recorded on an hourly basis at the ladder exit, turn pool and junction pool using permanently mounted equipment. Little Goose was able to install the permanent fish ladder temperature control system in 2018, but has run into numerous issues with reliable operation.

Water clarity was measured during all adult fish passage facility inspections. Measurements were taken in the adult fish ladder using a Secchi disk that could be lowered to a maximum depth of just over 6 feet. Anything over 6 foot is noted as 6+ feet.

Collection channel subsurface water velocities were measured monthly using a rickly velocity meter. Measurements were taken just below the surface, at mid depth and just above bottom and averaged. Additionally, collection channel surface water velocities were measured using a floating stick or bubble that was timed over a distance and calculated into feet per second.

Invasive species were monitored, with particular attention to Zebra Mussels and Quagga Mussels. Reports were submitted weekly to district.

Four Peaks and USACE conducted fish counting activities and monitored for and reported bull trout migration past the adult fish ladder. Sightings are reported annually to U.S. Fish and Wildlife Services.

The juvenile fish facility was operated for juvenile fish transport/bypass and adult fallbacks counts from April 01 to October 31.

## LOWER GRANITE DAM FISHWAY SUMMARY 2019

---

### FISH COUNTING SCHEDULE

1 Jan – 28 Feb	No counting.
1 Mar – 31 Mar	Video counting daily 0600 – 1600 hours PST.
1 Apr – 31 Oct	Visual counting daily 0400 – 2000 hours PST.
15 Jun – 30 Sep	Night video counts for sockeye 2000 – 0400 hours PST.
1 Nov – 31 Dec	Video counting daily 0600 – 1600 hours PST.

---

### FISH LADDER OPERATING SCHEDULE

1 Jan	Ladder in service
2 Jan – 14 Feb	Dewatered for annual maintenance
14 Feb – 31 Dec	Ladder in service

---

### FISHWAY ACTIVITIES

An issue with the fish count backboard was identified and the adult fish ladder was dewatered for repairs from 1200-1615 hours May 2. Fish ladder water temperatures were monitored hourly at the ladder exit, diffuser 14, turn pool, and junction pool. These temperatures are posted at [http://www.nwd-wc.usace.army.mil/dd/nww/fl\\_temps/www/index.html](http://www.nwd-wc.usace.army.mil/dd/nww/fl_temps/www/index.html). The temperature control system pumps were operated from June 14 until September 25.

Substrate media at the ladder exit pool was examined monthly for zebra and quagga mussels from March through December. No mussels were found.

Fish ladder AWS pumps were out of service for annual maintenance from December 31, 2018–February 14. AWS Fish pump 1 outage was extended to May 7 for lower guide bearing replacement. All 3 ASW supply pumps were removed from service from 1230 hours May 1 until 1624 hours May 2 for fish count backboard repair. Pump 1 and pump 2 stop logs were swapped and pump 1 testing was completed and returned to service during counting window backboard repair. The remainder of the season was operated with AWS pumps 1 and 3. AWS pumps 1 and 3 were temporarily removed from service from 1715 hours December 17 to 1700 hours on December 19 to support emergency repair work for leaks encountered during spillway 1 PIT tag array installation.

Lower Granite adult fish trap was watered up on March 28 and operated April 4 – November 14. The adult trap was dewatered during ladder fish count backboard repair May 2. Adult fish trap sampling did not occur from 0806 hours September 6 through 1600 hours September 12 due to NOAA personnel having concerns with adult trap water temperatures reaching 70° F. Adult trap average daily water temperature strings ranged between 68.2°F and 70.9°F during this period. Adult fall Chinook were collected and transported by Nez Perce Tribe and WDFW August 7 –

October 24 for hatchery broodstock. Adult Coho for Nez Perce run reconstruction were collected from October 2 – 25. IDFG collected and transported B-run steelhead from the adult trap October 2 – November 12.

The juvenile fish facility was operated for fish transport/bypass from March 25 – November 1. The juvenile fish facility was dewatered November 1 and the system was placed into primary bypass. The primary dewatering structure and orifice collection gallery were dewatered on December 18.

### FISH COUNTING SCHEDULE

### 2019 FISH LADDER OPERATING AND MAINTENANCE SCHEDULE – PRIEST RAPIDS and WANAPUM DAMS

Fishway inspections are conducted by a project operator at least once per day (walk-through) to ensure that fish facilities are operating within criteria limits. A daily log of the inspections is compared with the computerized printout to assure correct calibration of the fishway control system. At the discretion of National Marine Fisheries Service or Fish Passage Center, at least one inspection of the fishways is conducted by one of these agencies each month during the adult fish-passage season (April 15–November 15).

Normal winter maintenance occurs from December 1 to March 31. The fishways may be dewatered during this time to allow annual maintenance of fish facility equipment, including pumps, diffuser gratings, valves, and orifice and entrance gates as necessary to assure their readiness during the adult fish-migration period. Fish and Wildlife personnel are present at all dewaterings to assure proper fish handling procedures are followed.

Maintenance which requires dewatering, or that will have a significant effect on fish passage, is done during the winter maintenance period of December 1 through March 31. Facility maintenance that does not affect fish passage may occur at any time of the year. Concurrent outages of both fishways are avoided whenever possible to provide an upstream fish passage route at the dams at all times. When facilities are not being maintained during the winter maintenance period, they are operated according to the normal operating criteria, unless otherwise coordinated in advance.

### 2019 FISHWAY ACTIVITIES

#### Adult Fish Counting

The video fish-counting system uses digital video cameras installed in the fishways to assist with counting migrating fish at Priest Rapids and Wanapum dams. Digital video images are streamed 24 hours per day to a digital video recorder (DVR) at each dam. These DVRs are networked and accessed by fish counters via computers from the fish-counting room at the Wanapum Maintenance Center. The fish counting staff playback these images in a fast-forward mode until a fish is observed, then slowed for fish identification and count. During periods of concentrated fish passage at the count window, playback is slowed down to real time or replayed to facilitate counting accuracy. At the end of each day all counts are

electronically tallied and a fish-count report is generated for each dam and posted on Grant County PUD's Fish and Wildlife's website: <https://www.grantpud.org/fish-wildlife>.

During routine fish-count operations from the April 15 to November 15 season, two bull trout were observed in the left-bank fishway at Wanapum Dam on May 31 and June 7, 2019.

#### Adult PIT Tag Detection

The PIT tag detection array receives annual maintenance prior to the adult fish count season and is located in the exit section in both ladders of Priest Rapids Dam. The detection system is operated continuously whenever the adult fishways are operational; detected tags are automatically uploaded to the PIT Tag Information System website. Another PIT tag monitoring site is located within the Off-Ladder Adult Fish Trap.

#### Off Ladder Adult Fish Trap (OLAFT)

The Washington Department of Fish & Wildlife (WDFW) sampled steelhead trout for the agency's stock-assessment program beginning on July 8 and typically operated the trap on Mondays, Wednesdays, and Fridays of each week through November 1, 2019. Concurrent with the WDFW steelhead sampling, the Yakama Nation were on site at the OLAFT two or three days per week from September 23 through October 16 to sample and PIT-tag adult Coho salmon for the mid-Columbia Coho reintroduction program. In addition, the WDFW trapped fall Chinook salmon to augment broodstock collection for Priest Rapids Hatchery three days per week beginning September 9 and finishing October 18. The OLAFT was completely dewatered and winterized for the season on November 4, 2019.

#### Adult Lamprey Passage Study

During the eleventh year of implementation of the Pacific Lamprey Management Plan, Grant PUD continued, for a tenth year, its assessment of Pacific Lamprey behavior and passage efficiency through fishways at Priest Rapids and Wanapum dams to evaluate the efficacy of design enhancements installed during the 2009-2010 winter fish ladder maintenance outage. For the 2010 through 2019 migrations, Grant PUD monitored a total of 652 and 647 half-duplex passive integrated transponder (HDX-PIT) tagged lamprey at Priest Rapids and Wanapum dams, respectively. Fishway passage efficiency for lamprey ranged from 62.3 to 100.0% with a standard error range of 2 to 19% at Priest Rapids Dam over the 2010-2018 period and ranged from 44.4 to 100.0% with a standard error range of 2 to 35% at Wanapum Dam over the 2010-2013, 2015-2018 period. The fishway passage efficiency for the entire 2010-2018 comprehensive dataset is 94.6% and 100.0% at Priest Rapids and Wanapum dams, respectively. Low passage efficiency estimates were associated with small sample sizes in some ladders in certain years. Fishway passage efficiency for 2019 is not yet available and will be included in the 2020 annual report.

During the 2019 adult Pacific Lamprey migration period, fish from tagging efforts downstream were used to evaluate Project passage efficiency and to estimate passage times through the fishways at Priest Rapids and Wanapum dams. Pacific Lamprey were HDX-PIT tagged and released at Bonneville Dam by University of Idaho and the Confederated Tribes of the Warm Springs. The median passage time at the Priest Rapids and Wanapum fishways was 23.5 hours and 85.9 hours, respectively.

### Fish Facility Activities

The bypass trap at the 2<sup>nd</sup> powerhouse was operated by Chelan County PUD Natural Resource Department employees from 1 April through 31 August 2019. Juvenile fish were sampled daily during that time period. The annual bypass (biological) evaluation included the collection of species composition and fish condition data.

The adult fish PIT tag system was operational throughout the 2019 adult fish migration. In February, a new PIT tag system, consisting of four overflow antennas and four orifice antennas, was installed by Biomark, Inc. in the lower right bank ladder for the purpose of improving PIT tag detection efficiency within the ladder and across the entire project. PIT tag detections from all three fishways were uploaded daily to PTAGIS.

## ROCKY REACH DAM

---

### Fish Counting Schedule

Jan 1 - Apr 13	No video recording or fish counting during this period.
Apr 14 - Nov 15	Video recording 24 hours per day/7 days a week. Video counting daily from 0700 to 1530 hours Pacific Standard Time.
Nov 16 - Dec 31	Video recording 24 hours per day/7 days a week to monitor bull trout passage.

---

### Fish Ladder Operating Schedule

Jan 1	Fishway in service.
Jan 2 - Feb 14	Fishway out of service for 2018/2019 annual maintenance period.
Feb 15 - Dec 15	Fishway in service.
Dec 16 – Dec 31	Fishway out of service for 2019/2020 annual maintenance period.

---

### Fish Facility Activities

The adult fish PIT tag system was operational throughout the 2019 adult fish migration. In January, Biomark, Inc. upgraded the system to integrate the newest PIT tag technology. PIT tag detections from the fishway were uploaded daily to PTAGIS.

The juvenile fish bypass system was operated for fish passage from 1 April through 31 August 2019. Juvenile fish were sampled daily by Chelan County PUD Natural Resource Department employees during the same time frame. The annual bypass (biological) evaluation included the collection of species composition and fish condition data.

## WELLS DAM

---

### FISH COUNTING SCHEDULE

The adult counting schedule at Wells Dam is from May 1 through November 15, though passage data is recorded each day of the year, and that data is available from Douglas PUD upon request. Fish are counted by reviewing digital-video files from previous days. From 1967 through 1997, counts were reported for a 16-hour period (0500-2100 PST). Since 1998, 24-hour counts (0000-2400) have been reported. Chinook are arbitrarily separated into three populations based upon date of passage through the ladders: Spring Chinook – May 1 through June 28, summer Chinook – June 29 through August 28, and fall Chinook – August 29 through November 15. Substantial overlap in spring, and summer Chinook passage occurs in June and early July, such that reported dam-passage counts over-represent actual spring Chinook numbers and under-represent actual summer Chinook numbers.

### FISH LADDER OPERATING SCHEDULE

Other than during routine wintertime inspection and maintenance (performed on only one fishway at a time), the two fishways at Wells Dam operated continuously during 2019.

#### **East Ladder Maintenance**

January 7, 2019, to February 5, 2019, outage for inspection and maintenance.

#### **West Ladder Maintenance**

February 12, 2019 through May 1, 2019, outage for inspection and major maintenance.

### JUVENILE PASSAGE FACILITIES

The juvenile bypass system at Wells Dam capitalizes on the hydrocombine design of the dam by using flow to the turbines to attract fish to bypass spillways located between turbine silos and above turbine intakes. During the juvenile salmonid outmigration, bypass baffles and barriers are installed in spillway intake slots to partially constrict the five even-numbered spillways, providing a strong flow net to the constricted intakes. This configuration provides for high bypass efficiency (92% to 96%) with no more than 10,200 cfs of total bypass flow, and any involuntary spill through the six unmodified, odd-numbered spillways provides additional non-turbine passage opportunity.

During periods when plant discharge exceeds the combined turbine and bypass capacity, excess water is passed through non-bypass spillways and bypass spillways as necessary for complying with Federal Energy Regulatory Commission (FERC) requirements for maintaining minimum automatic-gate-opening capacity under the *Wells Project Emergency Action Plan* and Washington Department of Ecology requirements for compliance with total dissolved gas (TDG) standards as directed by the FERC-approved *Total Dissolved Gas Abatement Plan* for the Wells

Project. When necessary, gates on non-bypass spillways are opened and bypass barriers and baffles on bypass spillways are removed sequentially with increasing flow in a prescribed order that concentrates involuntary spill in the center of the project over the discharge from active turbine units to minimize TDG. As discharge declines, bypass barriers are reinstalled and non-bypass spill gates closed in the reverse order in which they were removed and opened.

Douglas PUD operated the Wells bypass system in 2019 as guided by the Wells Habitat Conservation Plan (HCP) Coordinating Committee-approved *2019 Bypass Operating Plan*. Flow volumes during the 2019 freshet never reached the levels necessary to remove barriers either to maintain compliance with the EAP or to set up spill configurations to manage TDG.

The *2019 Bypass Operating Plan* was intended to provide non-turbine passage during no less than 95 percent of the juvenile HCP Plan Species migration passing Wells Dam. Bypass operations were initiated on April 9 at 00:00 hours, and operated continuously until terminated at 24:00 hours on August 19, for a total of 133 days. Douglas PUD achieved the HCP requirement to provide bypass operations during at least 95 percent of the juvenile salmon and steelhead migration passing Wells Dam, providing bypass passage during 100 percent of the yearling and subyearling Chinook, steelhead, and sockeye migrations, and 99.99 percent of the coho migration passing Wells Dam in 2019.
