MEMORANDUM FOR THE RECORD: 18 LGS 03 change SW position

SUBJECT: Notification of Operational Change in SW elevation

The RCC forecast (4-2-18) for Snake river flows indicates we will likely meet the 85 kcfs threshold around April 6 to change the position of the ASW crest to the low position. Flows are expected to remain above this flow threshold for three or more consecutive days. Juvenile fish passage at LGR and LGS is still relatively low but starting to trend higher.

Sounds fine to me. Can talk at FPOM about if we need to keep the notification so formal or if an email notification will do.
