

# Developing a Thermal Mosaic of the Willamette River

Norman Buccola and Stewart Rounds

Willamette Fisheries Science Review

Corvallis, OR

02/07/2017

# Thermal and Water-Quality Diversity

- **Summer Off-Channel monitoring**
  - UO/OSU: 2007-2016 synoptic monitoring focus
  - USGS: 2015-2016 continuous monitoring focus
- **Main channel temperature model**  
(2015, 2011, 2001, 2002)
- **Synthesis of measured and modeled data**
- **Flow Scenarios**
- **Temperature toolkit**

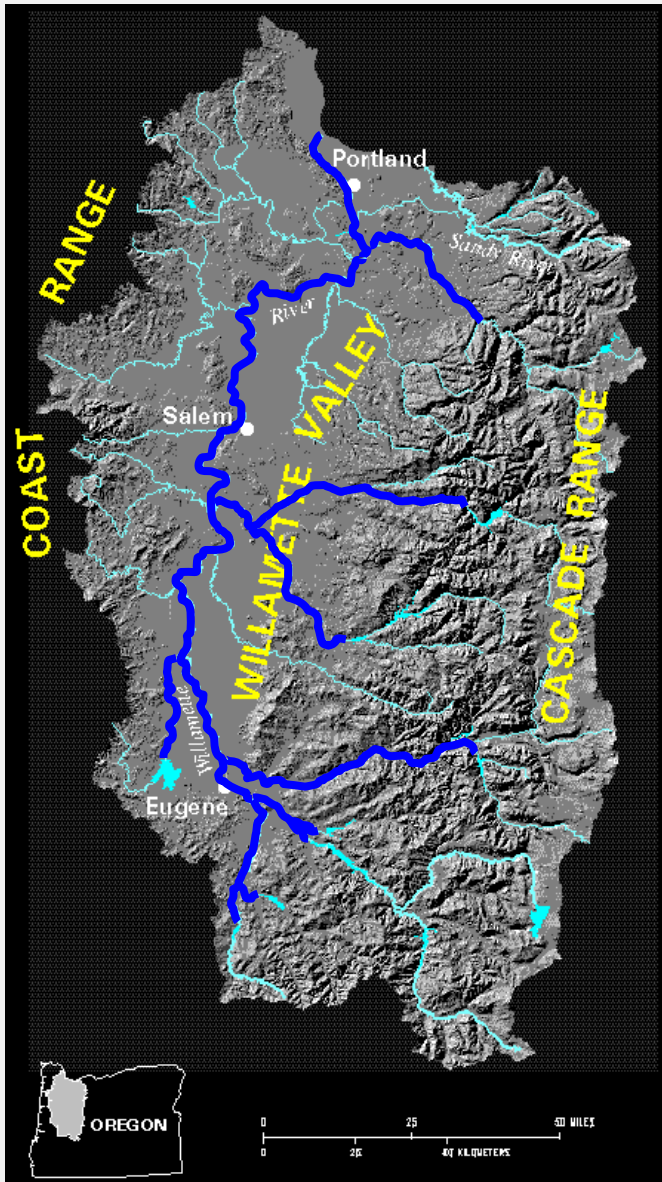

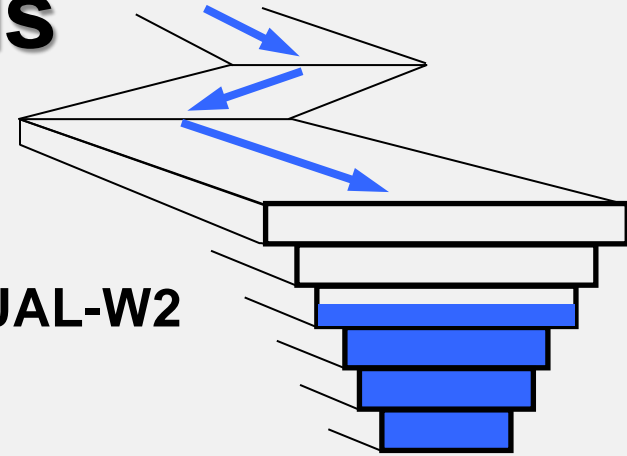

# Willamette River 2011/2015 Temperature

7dADM: 7-day average of daily maximum

Data from USGS, <http://waterdata.usgs.gov/nwis>

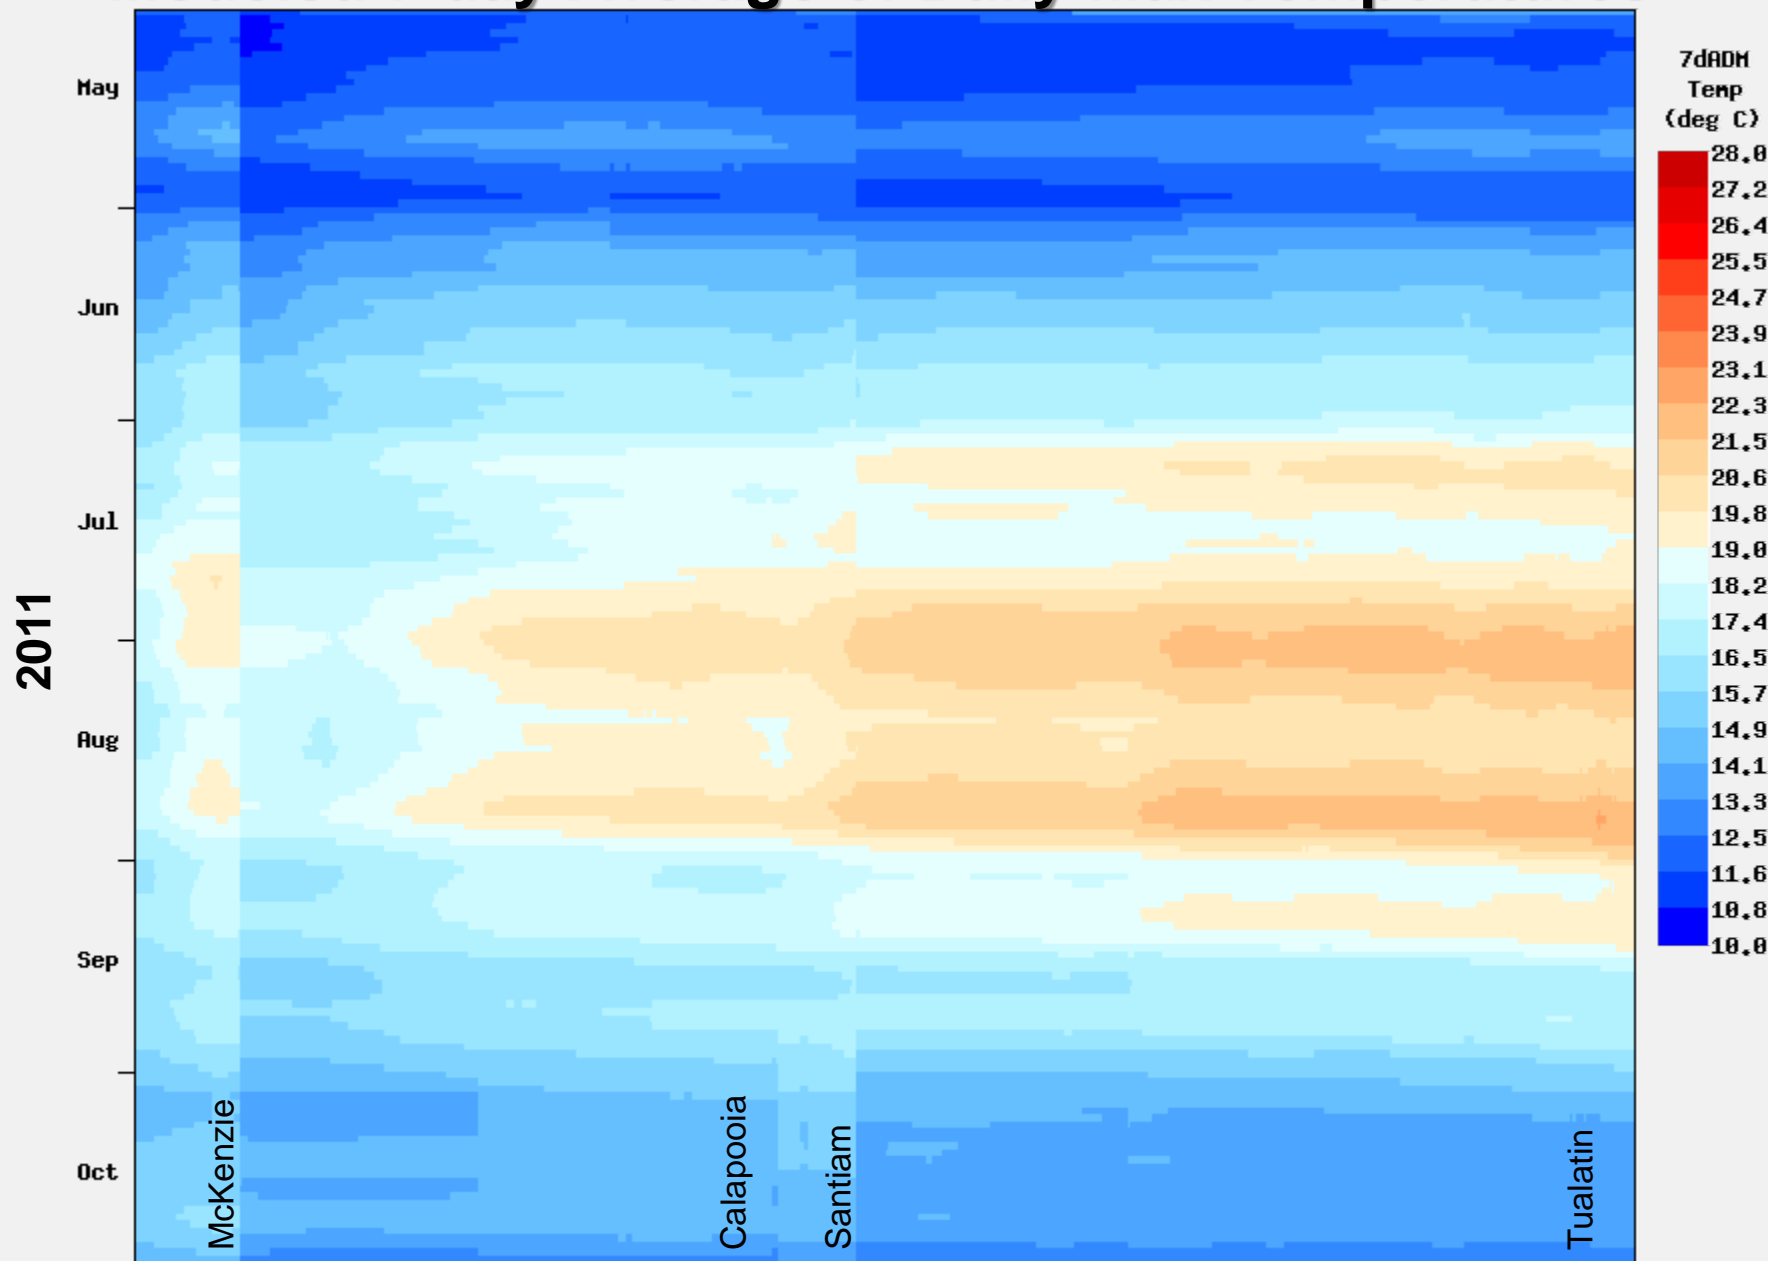

# Willamette River Models

map from USGS

- Calibrated for 2001 and 2002 for temperature TMDL.
- Used to assess effects of upstream dams.
- Used to evaluate 2011 (cool/wet) and 2015 (hot/dry) conditions and aid in evaluations of flow management
- Used to help quantify a *Thermal Mosaic* of the river.

# Modeled 7-day Average of Daily Max Temperatures

River Mile

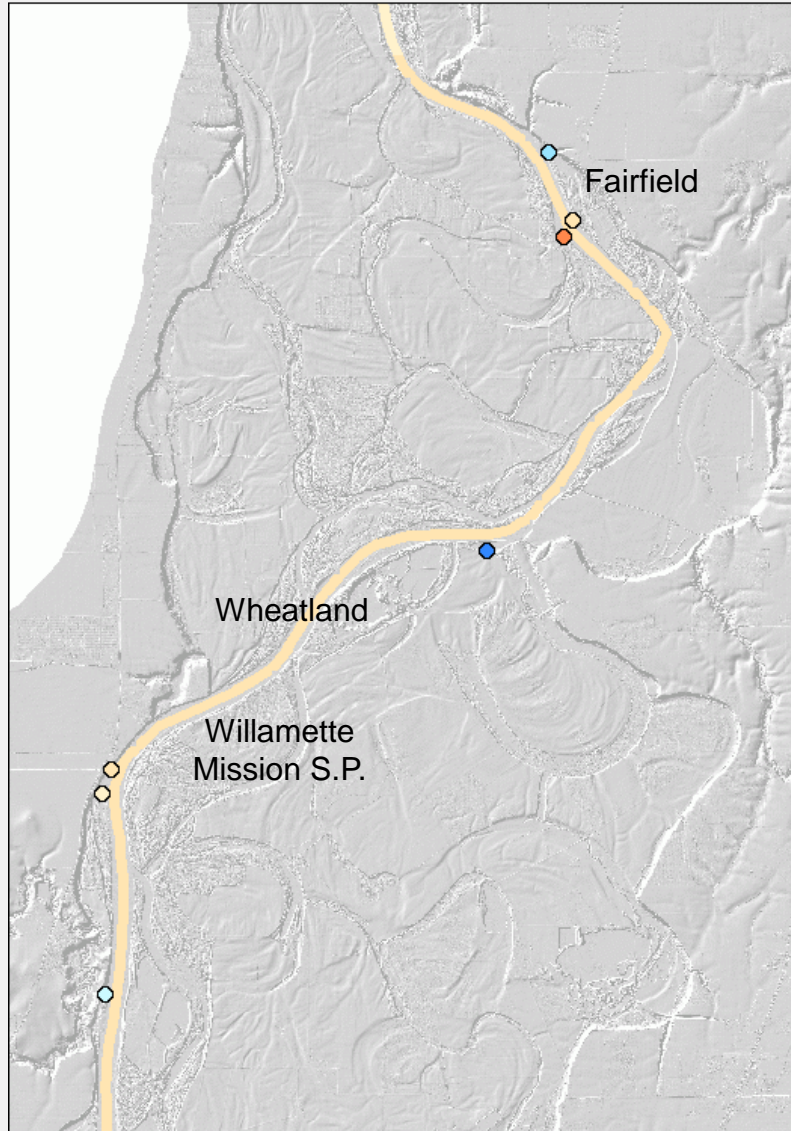

Preliminary results; subject to revision

# Modeled 7-day Average of Daily Max Temperatures

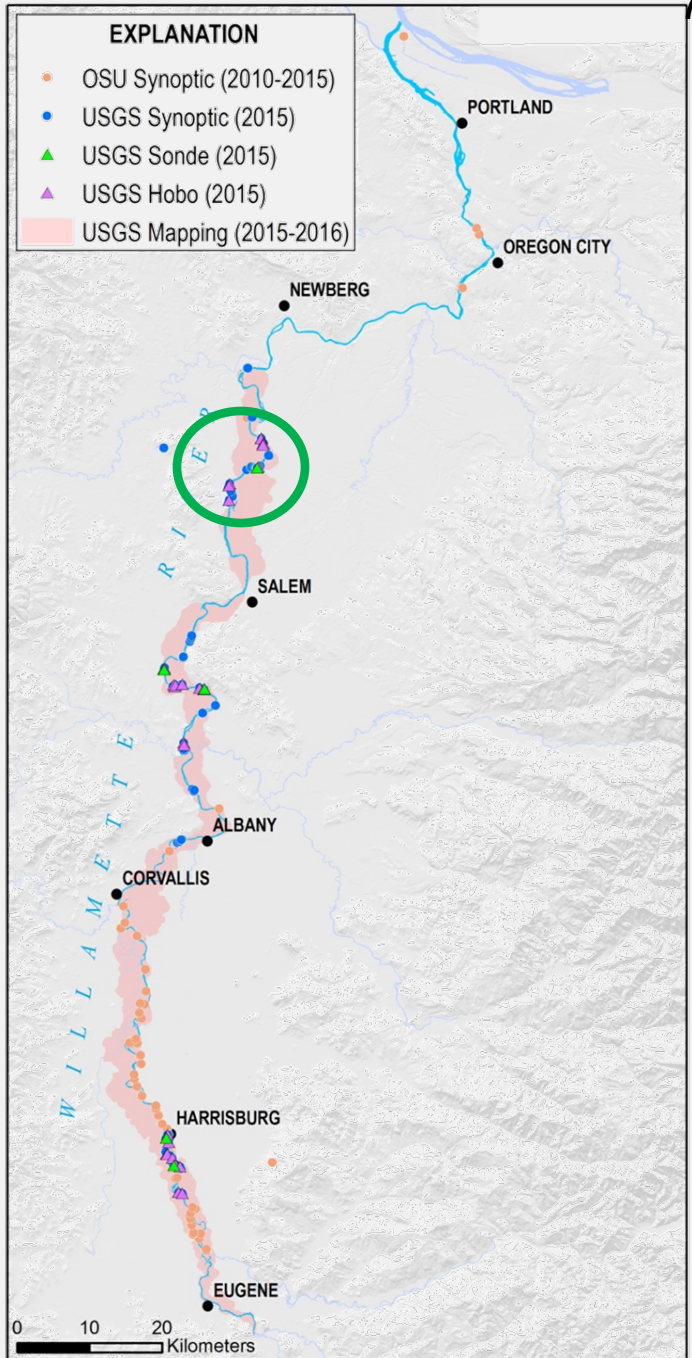

# Wheatland Ferry Reach (RM 67-77)

Willamette River near Willamette Mission  
31-Aug-2015

7dADM = 7-day average of daily maximum

# Independence/Santiam (RM 96-108)

Willamette / Santiam Confluence

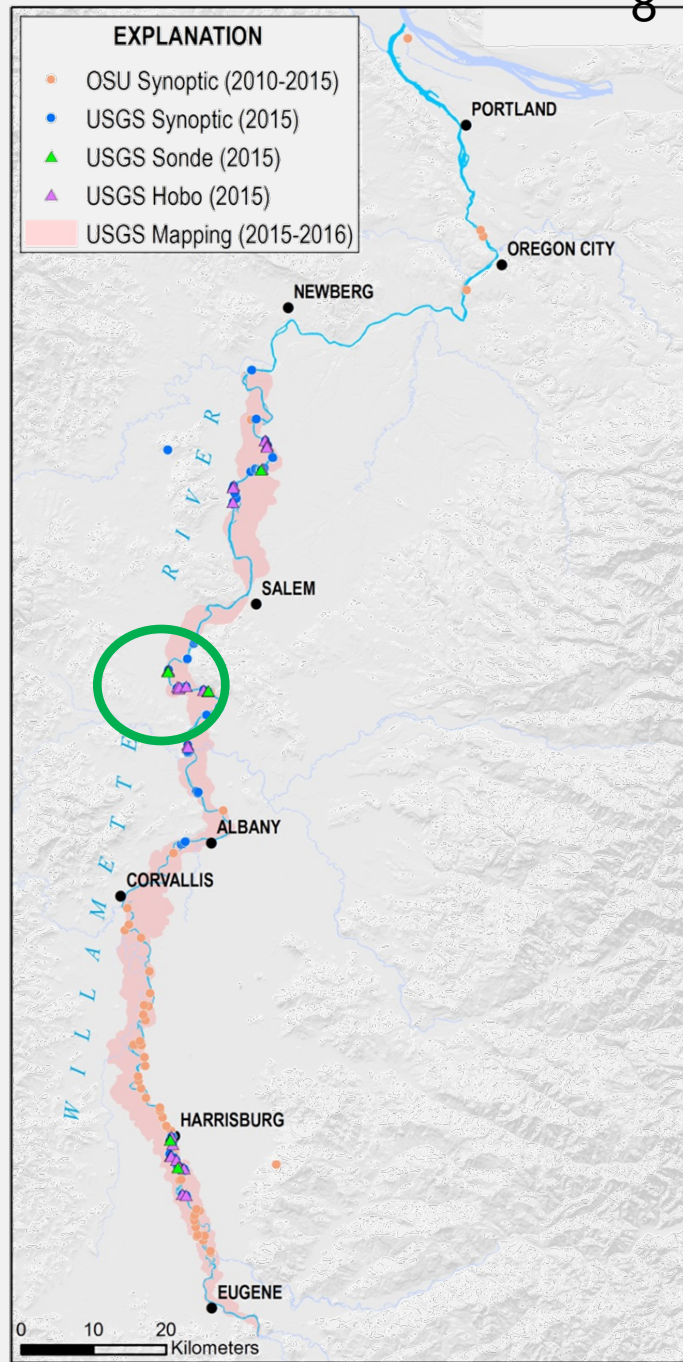

30-Aug-2015

7dADM  
Temp  
(deg C)

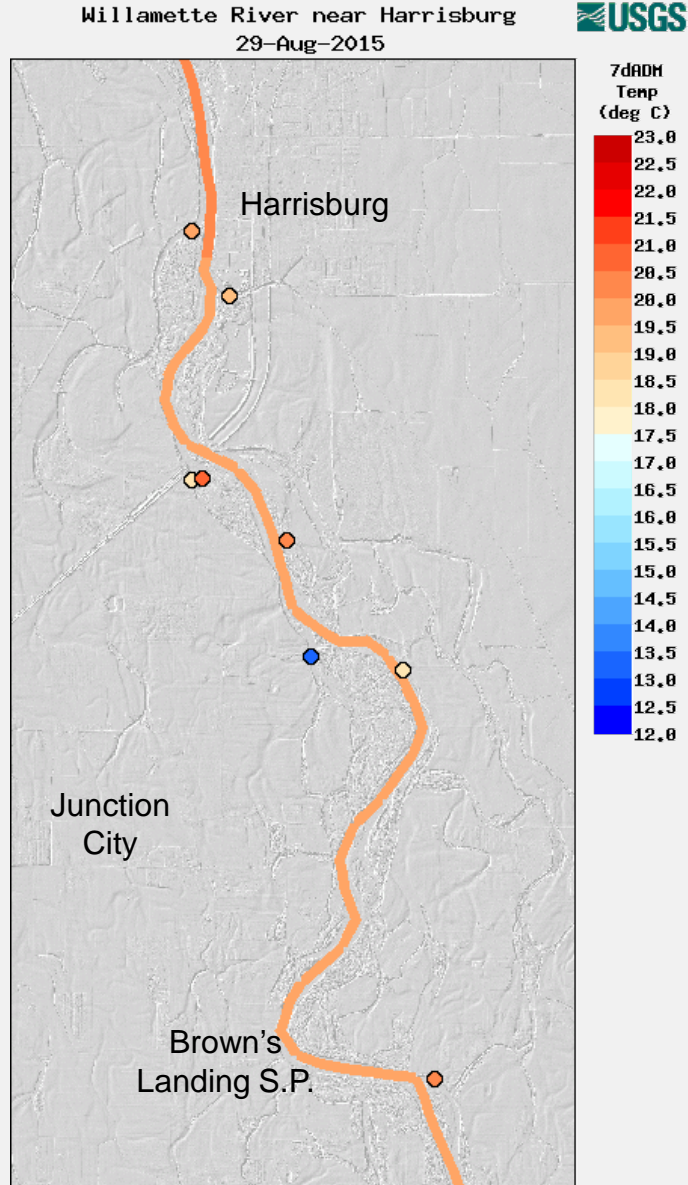

7dADM = 7-day average of daily maximum

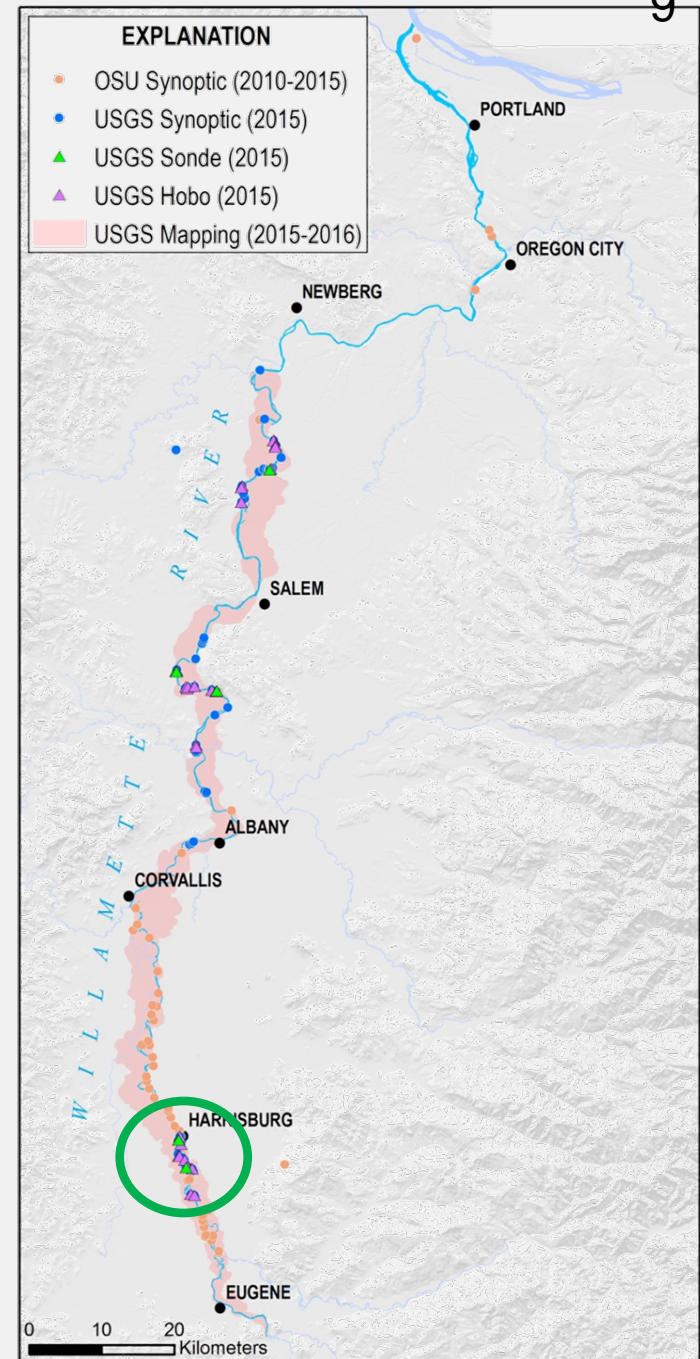

# Upstream of Harrisburg (RM161-164)

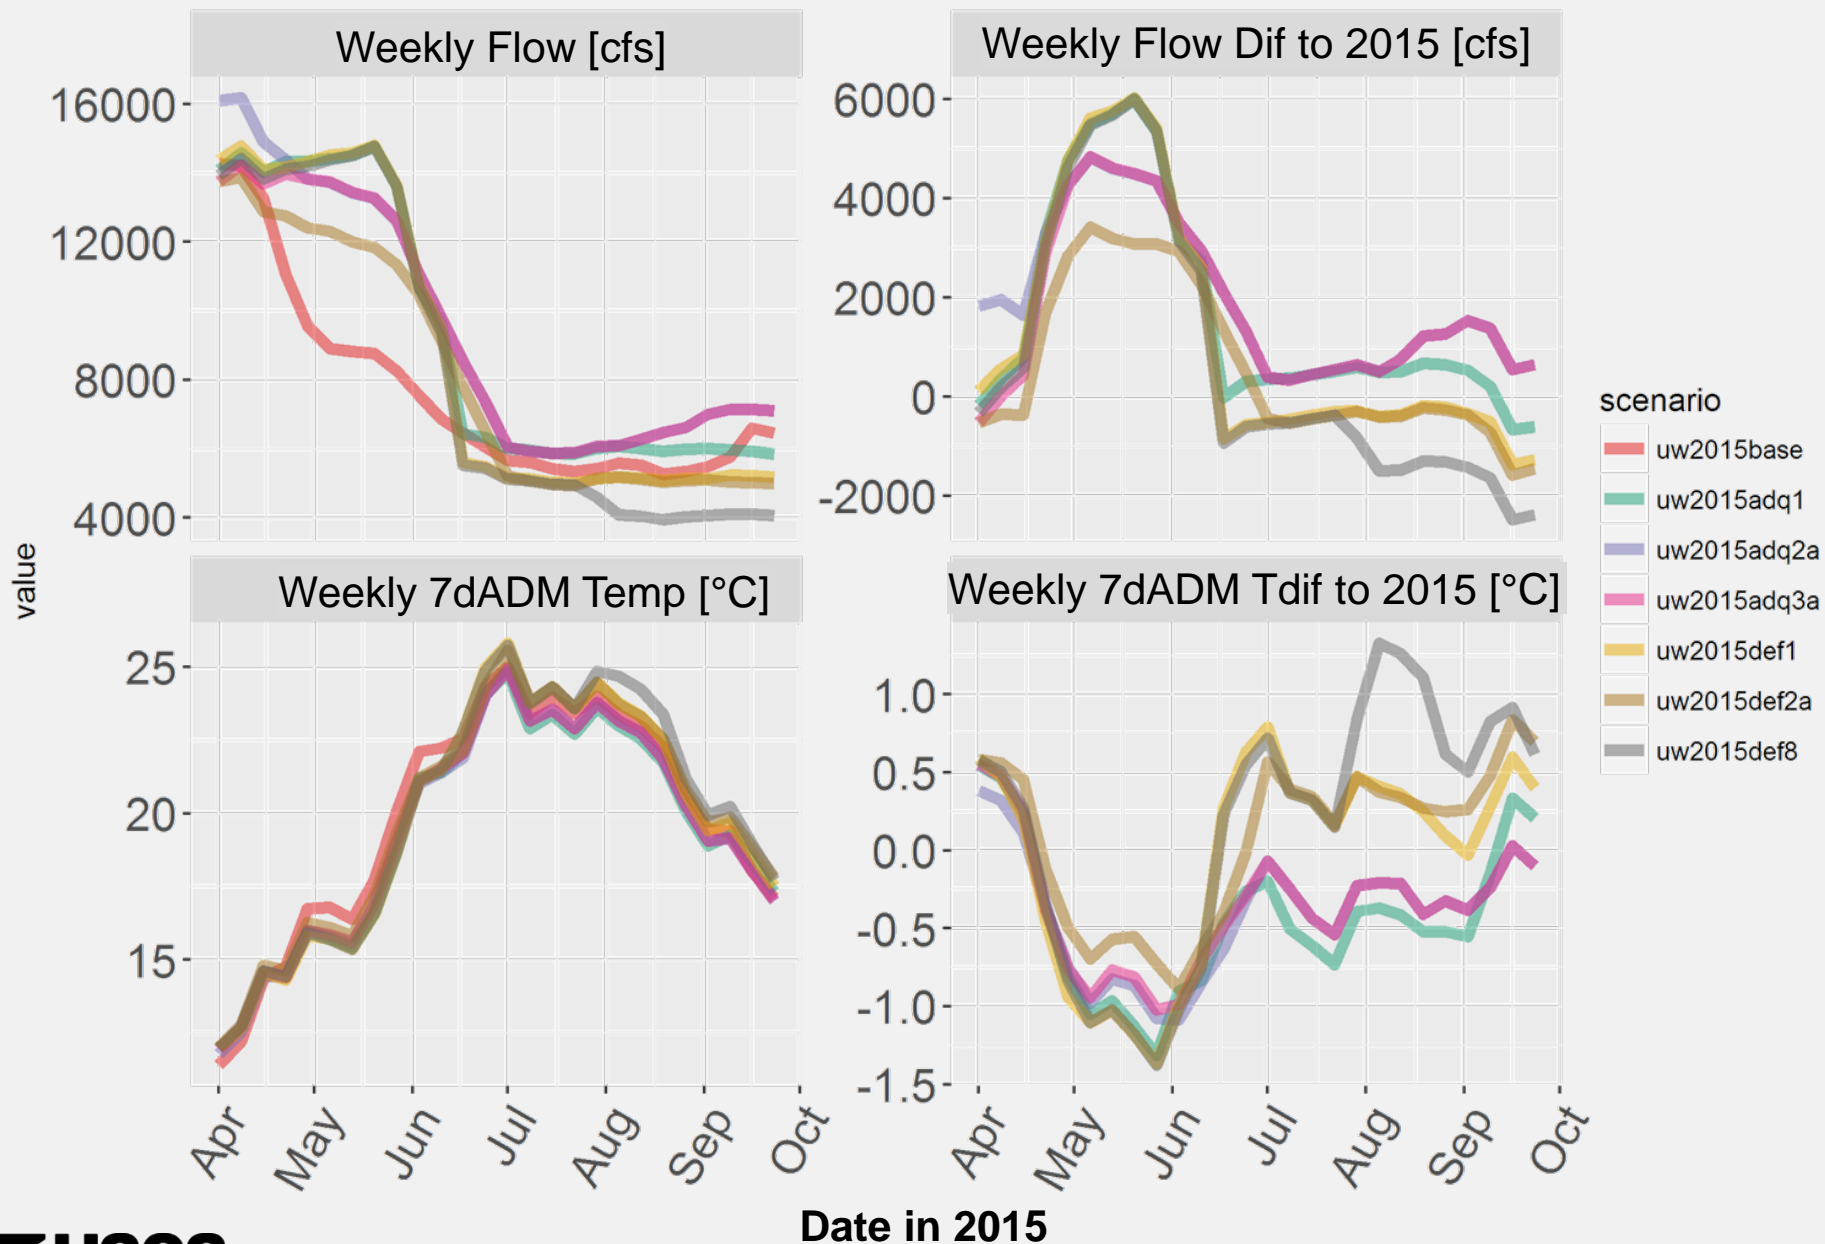

7dADM = 7-day average of daily maximum

# Operation Scenarios – Flows at Salem

# Operation Scenarios at Salem – Flows and Temp

# Regressions of Flow Scenarios at Salem

**Apr1-Jun30 2015 ~ 0.26°C decrease for 1000 cfs increase**

**Jul1-Sep30 2015 ~ 0.46°C decrease for 1000 cfs increase**

<b>Qdif [cfs]</b>	<b>Tdif °C [Apr1-Jun30]</b>	<b>Tdif °C [Jul1-Sep30]</b>
-2000		0.92
-1000	0.26	0.46
0	0	0
1000	-0.26	-0.46
2000	-0.53	-0.92
3000	-0.79	
4000	-1.05	
5000	-1.32	
6000	-1.58	

# Predicting Water Temperature at Salem

## Question:

Is it possible to predict 7-day water temperature at Salem from other measured datasets, such as flow and air temperature?

## Datasets:

14192015 - Willamette River at Keizer (water temperature [WT])

14191000 - Willamette River at Salem (streamflow [Q])

14207200 - Tualatin River at Oswego Dam (air temperature [AT])

Focus on spring period: April-June

## Methods:

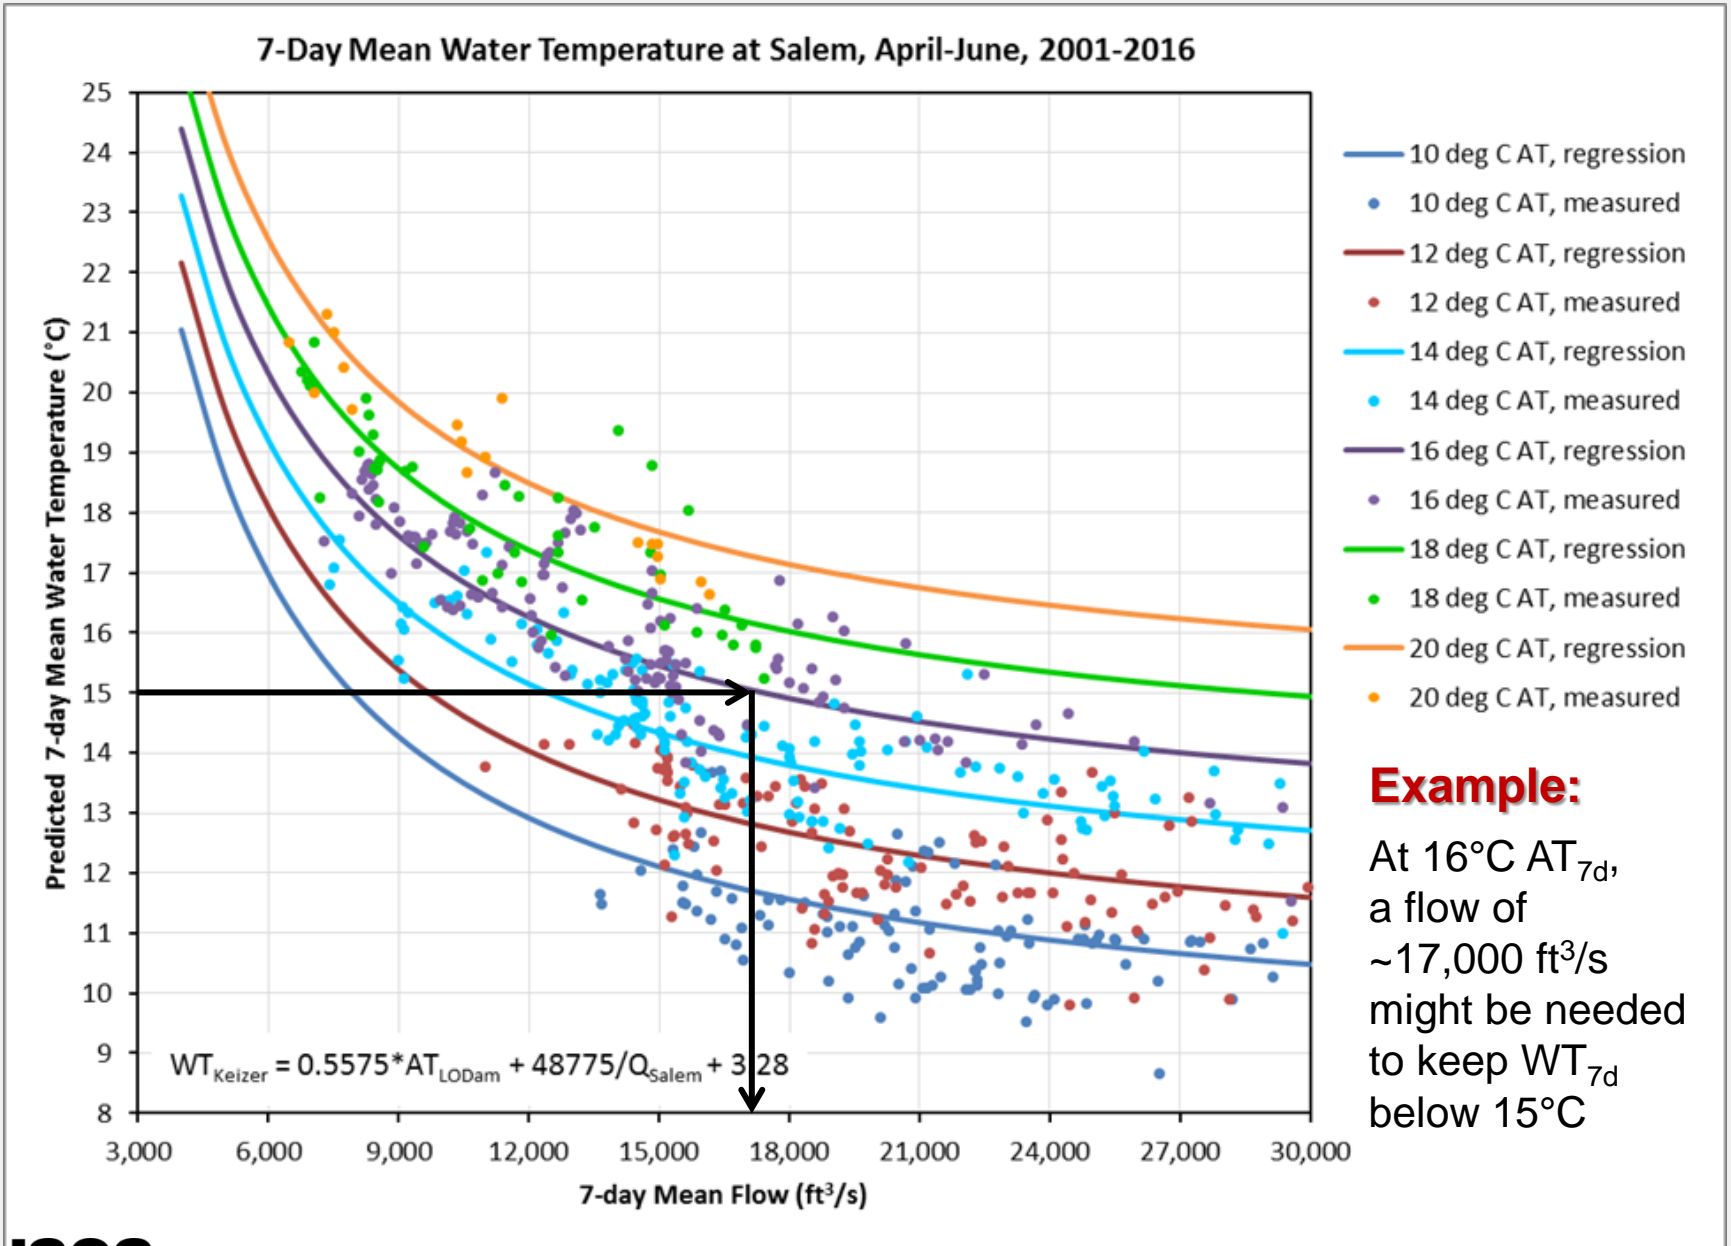

Multiple linear regression; different functional forms:

$$WT_{7d,Keizer} = a * AT_{7d,ODam} + b * Q_{7d,Salem} + c$$

$$WT_{7d,Keizer} = a * AT_{7d,ODam} + b * \log_{10}(Q_{7d,Salem}) + c$$

$$WT_{7d,Keizer} = a * AT_{7d,ODam} + b/Q_{7d,Salem} + c$$

# Predicting Water Temperature at Salem

# Conclusions

**Thermal diversity in the Willamette exists, and is needed!**

- **Models quantify conditions in main channels**
- **Flow changes can affect temperature, but flow cannot overcome effects of weather**
- **Flow changes have larger effect during summer (low flow)**
  - **Spring ~ 0.26°C decrease for 1000 cfs increase**
  - **Summer ~ 0.46°C decrease for 1000 cfs increase**
- **Regression tools based on flow, air temperature could assist management**
