Behavior, Distribution, and Passage Metrics of Juvenile Chinook Salmon Above and Below Lookout Point Dam, Fall 2017 and Spring 2018

STUDY CODE: JPL-15-04-LOP

JS HUGHES AND GE JOHNSON

2016-2017 LOP Study

Objectives

- ▶ Estimate seasonal and diel passage metrics (residence times and survival rates) for tagged fish in reaches between telemetry receiver arrays, including:
 - LOP reservoir
 - LOP project (forebay+tailrace)
 - DEX project (forebay+tailrace)
- ▶ Characterize entrance and exit timing, residence time, and horizontal distribution for tagged-fish detected at each receiver array .

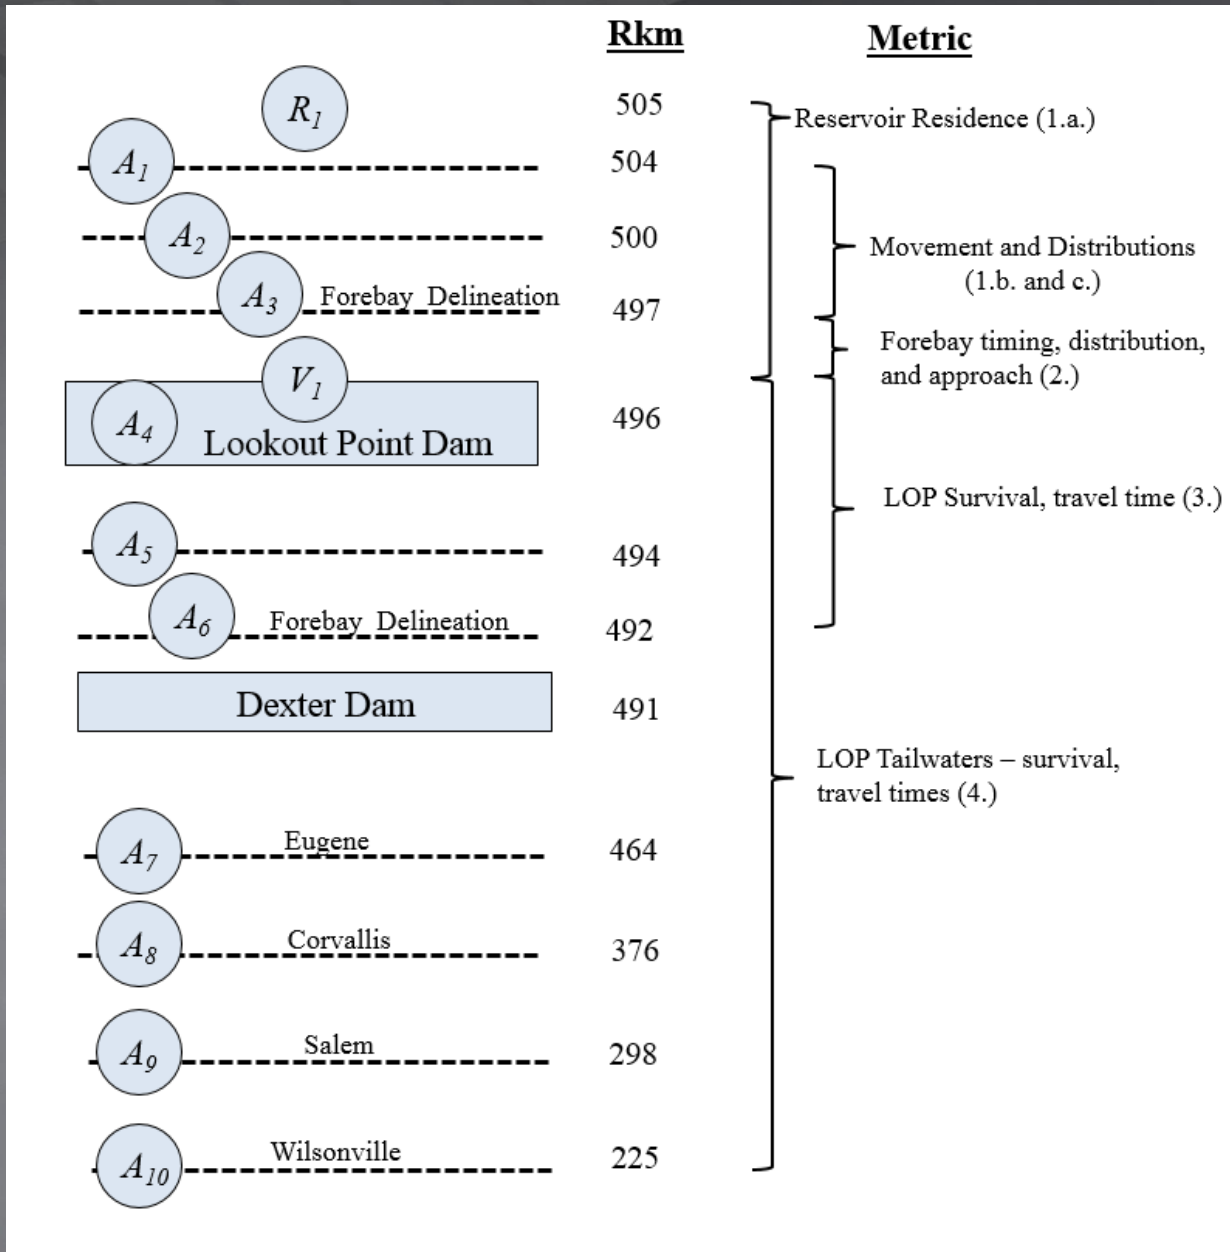

- ▶ Tagged and released 600 Chinook – October 2016
- ▶ Tag and release 600 Chinook – March 2017

Objectives; 2017-2018 Full Project

For Yearling and Subyearling Chinook (*O. tshawytscha*):

- For the reservoir, estimate distribution, behavior, and movements of study fish, including:
 - Reservoir residence time
 - Movement patterns within the reservoir (day/night)
 - Horizontal distribution at reservoir receiver arrays (day/night)
- For the forebay, estimate detailed distribution, behavior, and movements into and within the forebay, including:
 - Timing of entrance to the forebay and horizontal approach distributions (day/night)
 - Forebay residence time
 - Movement patterns and behavior (day/night)
- For Lookout Point Dam, estimate passage metrics and survival rates, including:
 - Route distribution (turbines, regulating outlets) (day/night)
 - Dam passage efficiency (DPE) and fish passage efficiency (FPE) (day/night)
 - Dam and route-specific single-release survival
- For the Lookout tailwaters, estimate survival rates and travel times to include:
 - LOP and DEX Dam project survival
 - Travel times between LOP and DEX, and LOP and Willamette Falls.

2017-2018 Full Study Design

2017-2018 LOP 3-D Array

Autonomous Receivers

LOP

Star Arrays

2017-2018 Tagging and Release

Table 1. Numbers of test fish.

Year	Season	Week	Time Frame	# Live Fish	# Dead Fish	Total # Fish
2017	Fall	1	Early Oct	375	32	407
		2	Mid-Oct	375	31	406
		3	Late Oct	375	31	406
		4	Early Nov	375	31	406
2018	Spring	1	Mid-March	375	32	407
		2	Late March	375	31	406
		3	Early April	375	31	406
		4	Mid-April	375	31	406
				3000	250	3250

Anticipated Results

▶ 2016-2017 Study

- Will inform full study in fall 2017 and spring 2018:
 - Receiver array locations/detection efficiency
 - Number of study fish we can expect to pass LOP in 2017-2018
 - 3-D tracking efficiency in the LOP forebay (testing fall 2016)
 - Preliminary results presented at WSR- February 2017

▶ Full study, 2017-2018

- Reservoir and forebay behavior
- LOP route-specific survival, passage distributions, etc.
- Residence and travel times
