

Fish Passage Plan (FPP) Change Form

Change Form # & Title: 25LMN005 – Dewatering Structure
Date Submitted: 12-NOV-2024
Project: Lower Monumental Lock and Dam
Requester Name, Agency: Denise Griffith, USACE
Final Action:

FPP SECTION: Chapter 7 (LMN), section 2.3.2.4. Juvenile Facilities / Fish Passage Season / Dewatering Structure

JUSTIFICATION FOR CHANGE: Current function of the screen cleaner does not have a minimum operation of once per hour. Air flush system is more effective than the screen cleaner brush and a combination of both is the most effective at cleaning the dewatering structure screen.

PROPOSED CHANGE: *Edits to existing FPP text in “track changes”.*

2.3.2.4. Dewatering Structure.

i. Ensure the trash sweep is operating correctly. The frequency of the sweep should be set as necessary to maintain a clean screen, with a minimum operation of twice within a 24-hour period, as long as the air flush runs every 10 minutes per hour. ~~of at least once per hour.~~ Operate the air flush as specified by the Project biologist to maintain a clean screen.

COMMENTS:

RECORD OF FINAL ACTION:
